IS CAREER EXPLORER TABLEAU DASHBOARD

This dashboard is published on our website to help you explore the career paths and opportunities available in the world of Information Systems. Use it to create your career dream so that we can help you achieve it! The dashboard pulls the Marriott School placement data of IS students.

- **Tab 1 - Main Career Explorer**
    - Filter the data by organization name, placement type, state, job category, placement year (year the student started working in that position), program, and international sponsors (companies that have previously hired international students).
    - Use the lasso tool on the map to select specific cities/areas that interest you.
    - The Offering Trends bar graph shows historic trends of when companies have made internship or full-time offers to BYU students. If you are interested in a specific company, you can filter by that company to see when they usually pitch their offers. This is important because some companies are on campus the second week of fall semester while others do not start recruiting until January. Knowing this information will prepare you for when your dream company is most likely to offer your dream opportunity.
    - Look at the Breakdown table to see the instance of each opportunity a student has taken broken down by placement type, company, job category, city, program, and placement year.
    - Select different categories on the pie charts to filter the whole dashboard by that job category or program. Hold down the Ctrl key on your keyboard to select multiple sections of the pie chart.
- **Tab 2 - Skills Explorer**
    - The data for this tab comes from a survey we send out to all IS students who have been out on internships or will be starting their full-time jobs. This is still in its beginning stages of development, so the database is relatively small.
    - Filter the data by organization name, placement type, program, and job category to find the organization. You can also filter by a specific skill you may want to target.
    - Use the skill search in the top right to type in specific hard skills to filter by (C#, HTML, CSS, etc.). Filtering by these skills, will give you an idea what types of jobs require skills you may want to learn or might want to highlight in a interview with your dream company.
    - Use the Alumni & Student Skills table to see each instance of each opportunity a student has taken, broken down by organization name, placement type, location, job title, and student name.
    - Hover over a student name to see the details of which program they were in, their contact information, and the skills they used on the job.
    - If the students contact informtaion is listed in the tool tip hover, they have agreed to connect with students interested in the company they interned/worked for. Their proffered contact method is listed so you can contact them directly. If you do not see a contact for a company you are interested in, come in and visit with Reid to access his connections.
